

Re Move™

Mycotoxins

- May bind harmful polar and non polar mycotoxins
- Contains prebiotic to support gut health
- Fast acting non medicated

What is Re Move™?

Re Move has been formulated from specific ingredients that may bind harmful mycotoxins in the horse's digestive tract during periods of high mycotoxin contamination. Re move is designed to bind to the polar and non-polar mycotoxins.

What is a Mycotoxin?

Mycotoxins can be found in the fungi that grow on some grasses - mainly paspalum, rye, couch and some weeds and clover. More than 500 mycotoxins have been identified to date. They are more prevalent in hot and humid conditions (spring and summer) and can also be found in some commercial feeds and hays.

Feeding Guidelines

Begin with 1tsp and gradually increase over 14 days.

One scoop is 0.7oz

Maintenance:

Morning feed: half of 0.7oz scoop

Night feed: half of 0.7oz scoop

Severe condition:

Morning feed: one and half of 0.7oz scoop

Night feed: one and half of 0.7oz scoop

Recommended dose for a 1100lb horse

Ingredients

A Proprietary Blend of [Mycosorb® A+, Actigen®, containing Saccharomyces cerevisiae, and Powdered Coconut oil (Power Stance®)] 20g.

Sizes Available

8.8lb

About the ingredients

Mycosorb A+ contains two main ingredients; a specific strain of yeast and algae meal, which are thought to bind to a range of toxins.

Actigen is a strain of yeast that contains Mannan Oligosaccharides (MOS). MOS are considered a prebiotic and are thought to promote the growth of healthy gut bacteria in the hindgut. They may also support the immune function.

Power Stance is powdered coconut oil. Coconut oil contains high levels of medium chain triglycerides (MCTs) which provide the body with a readily available source of lauric acid, which converts to monolaurin and may provide anti-bacterial, anti-microbial and anti-fungal properties. The benefits of supplementing animals with coconut oil may include improved digestive health, enhanced coat and skin condition.

Signs of Mycotoxin poisoning

Symptoms can vary widely but may include:

- Itchy skin and/or hairloss
- Scabby sores
- Stiffness
- String halt/staggers
- Wasted topline
- Sunburnt nose
- Persistent cough
- Odd sweating
- Coarse, dull coat
- Persistent greasy heel/rainscald
- Unexplained spookiness and dangerous behaviour

Mycotoxin poisoning may also cause the following without any obvious signs:

- Depleted minerals in the body
- Decreased immune function
- Negative impact on the kidneys, liver and reproductive system
- Severe cases can lead to death

Testimonial

"I had heard about toxin binders for a while through different people and equine nutrition forums but never really considered using one since my horses are lucky enough to be grazing on improved pasture. Then a few months back my thoroughbred developed scabby itchy patches along his back and down his legs and also noticeable drop in his top line.

I tried many different topical treatments and washes but no change, his back was hot and sore and no way I could put a saddle on him. I decided I had nothing to lose by trying **ReMove** and **within a week his itch was gone**. I have also noticed a **huge change in his overall condition and energy levels** in the weeks since then.

Barry's **coat is glistening and his muscle tone is the best it's ever been** but even more importantly my very hot headed and sensitive horse is **calm and so much happier in his work**. So incredibly happy with the results of something so simple. Barry and I are now looking forward to a great season eventing in top shape."
